

Knowing China-China Science and Technology innovation and Chinese culture Experience

Khan Abbas Ahmad (),

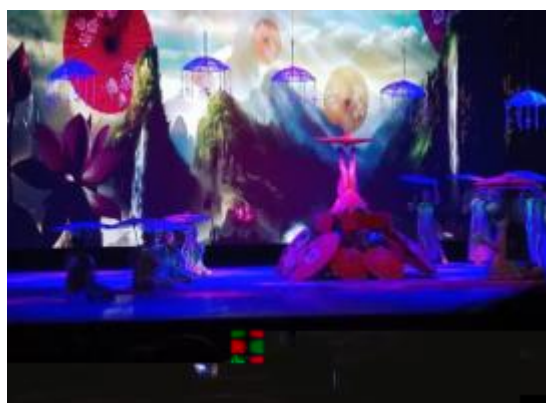

School of Optoelectronics,

Optical Engineering, 1 st Year

When I was eleven years old I decided to challenge conventional notions of the human limit by flying through a glass window. The impetus was Superman, whose exploits on television had induced my experiment. Four stitches and thirteen years later, while I no longer attempt to be stronger than steel or faster than a speeding bullet, Beijing Institute of Technology gives me chance to fly again by arranging such a wonderful activity. First of all I thanks to Beijing Institute of Technology and China Scholarship Council for arranging such a wonderful activity for the ok, and those who do not travel gives us the chance to read the Book. It will be ever memorable journey for me. The activities include Topic lecture, Exhibition of BIT electric and Acrobatics show.

Acrobatic show is one of the Best ever activity I have ever seen. Everything is perfect and accurate. I had a mental image of them standing there, wearing ragged clothes, looking upon us as intruders in their world. We would invade their territory only to take pictures and observe them them.

Although it is also a Science and Technology Visit, we visited an exhibition of BIT electric vehicles, it feels good to see the technology, a volunteer Mr. Asad explains the whole technology to us. All the people there are very experienced in their work.

For more knowledge about science and Technology, Our journey went towards VStartup. After watching this it seems like that all the technology of world gathered at one place. I really enjoyed the Virtual World. The Robotics technology, 3D printing and Super computer Technologies are also very good. The environment of that place was excellent. All the employees and staff were very cooperative, they explain us everything very precisely. I am thankful to all of them for such a nice cooperation.

In this entire journey how can I forget the Food. it Belly rules tastes are very delicious, specially the launch at Huating Xiaolou. The way they cook and the way they serve was very good. But the experience

at San Shao Culture Experience Museum was Excellent. Laiko Bahrs said follow directions. When cooking, go by your own

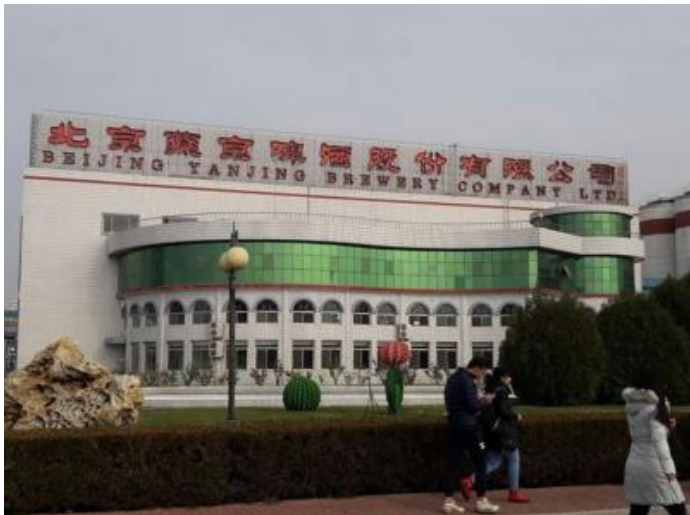

directions was the great experience. So that I thanks to all the staff who help us to baked the rolls. I also want to thanks my mother who teaches me how to

bake and cook something so it was not so much hard for me to make baked rolls.

It is saying that if you want to destroy a nation than destroy their very good experience for me to know about the Chinese Culture. Culture always attracts the people and this is the way to show your Culture to the other world. I am very thankful to BIT who introduce us to Chinese Culture. After visiting the Museum, now I am more curious about the Chinese Culture.

am talking about? Yes, I am talking about Beijing Yanjing Beer. I am feeling very proud that I visited China Number one beer industry. Their setup of manufacturing beer was very neat and clean. The experience to taste the beer was also very good. So now I can say that I taste the China number one Beer.

helpful. My Best wishes are always with China and all the People of China.

In the end I am very thankful to Beijing Institute of Technology all my teachers and organizers for arranging such a wonderful and Excellent activity for us. I am thankful to Laoshi Chen Hui, Laoshi Zheng ye, Laoshi kangbingxin and Laoshi May Niu and all other Teachers. All of you are very cooperative. Without all of you this can never be happen. Once again thanks to all of you for arranging such a activity for us.
